VIRTUAL SESSION

Preanalytical Pitfalls in Immunoassays

17 November 2026

12:00PM IST | 2:30PM GMT +8
3:30PM JST/KST | 5:30PM AEDT

When the result looks wrong, the problem may have started before the test.

Hemolysis. Lipemia. Specimen handling. Tube additives. Biotin interference. Preanalytical factors can challenge the reliability of immunoassay results in ways that aren't always immediately obvious. Join us and **Dr. Jayesh P. Warade** on **17 November 2026** for an hour-long practical session exploring what can go wrong before analysis and how laboratories can better recognize, investigate, and reduce these sources of variability.

WHAT YOU WILL TAKE AWAY

Recognize
common sources of preanalytical interference

Troubleshoot
unexpected or discordant results

Prevent
preanalytical errors with best practices

Improve
reliability through standardized workflows

SPEAKER

Dr. Jayesh P. Warade

MBBS, MD (Biochemistry), PhD
Senior Consultant Biochemist & Quality Leader,
Meenakshi Labs; Public Health Laboratory
NABL/NABH Assessor and Laboratory Quality Expert

Meenakshi Labs, Madurai, Tamil Nadu, India
